Hazetech, Goa — *Web Developer*

July 2020 - PRESENT

Working as a web developer, I am responsible for the development of projects in web technologies, and the development of backend admin panels and restful APIs delivery in JSON format. I also ensure the integration with client-side applications on Web and mobile platforms.

EDUCATION

Computer Science— *BCA*

MES College, Goa University

PROJECTS

Uniapp — Website, MIS & APIs

An Ed-tech platform on web & android app for Schools.

Technology Used: Laravel PHP Framework with MySQL, Bootstrap

The Web-based MIS and the Restful APIs enable the Teachers' Onboarding, Users' Profiling, Students' Enrolment, Attendance Marking, Reporting to Parents, and Classroom Sessions Management.

On this platform, the teacher's and students' listing and their in-depth details can be viewed.

Every single students' attendance can be viewed and marked on his view in MIS or in Android App via Restful APIs.

SKILLS

Backend Technologies: Core PHP, MySQL, Laravel Framework

Frontend Technologies: Flutter, Android, Bootstrap

JS Frameworks: Node.JS, Vue.JS

Languages: C, C++, Java, PHP, Javascript, HTML/CSS, Python (Beginner)

Personal Projects

CV Maker takes inputs for various sections from a student or professional and generates a CV in PDF

Weather App using WeatherStack API to show real-time weather of any location

Personal Portfolio website

Flutter Mobile App for APIs integration using MVC and Laravel Framework

LANGUAGE

English, Persian, Pashto

Advocate Consulting Platform

An online platform to search and consult the advocates

We used Node.JS with Express, MongoDB as database, and Flutter for the frontend technology. We used full-text search using AWS Elasticsearch to search and show listings of the advocates a user queries for in the web or mobile application. The listings are delivered conditionally via Restful APIs on the fly for the advocates under specific categories and by criteria like experience, fees, etc.
